

**SOME THINGS HAVE
TO BE BUILT
TO LAST.**

**Tantalum equipment
also provides product
purity and versatility.**

Great superstructures like the Diablo Dam have to deliver years of dependable service. So does pharmaceutical process equipment in order to provide operating efficiency and profitability in today's competitive market. **Tantalum equipment from H.C. Starck outlasts other materials in every pharmaceutical processing application.** It resists corrosion and prevents costly downtime.

Unlike impregnated graphite, tantalum also maintains product purity because it does not crack or flake. Because it offers the broadest range of corrosion resistance of any practicable metal, you can maximize efficiency and reduce cost by using the same tantalum equipment for all of your end products, eliminating the need for separate equipment for various product applications. Clean-up between process batches is minimal due to the nature of tantalum surfaces.

At H.C. Starck, we specialize in tantalum and have the engineering experience in processing applications to help with all your needs.
